

Business Recommendations Based on Customer Churn Analysis Project

1. Target Low Engagement Customers

Customers with low engagement should be targeted with personalized campaigns to increase activity and reduce churn.

2. Re-engage Inactive Customers

Customers who have not purchased recently should be re-engaged through discounts and reminder notifications.

3. Retain High-Value Customers

High-value customers should be prioritized with loyalty programs and exclusive benefits to improve retention.

4. Improve Experience for High Return Rate Customers

Customers with high return rates indicate dissatisfaction, so product quality and customer support should be improved.

5. Use ML Model for Decision Making

The churn prediction model should be used to identify high-risk customers so that preventive actions can be taken.

6. Monitor Using Dashboard

The Power BI dashboard can be used to continuously monitor customer behavior and track churn trends.

Conclusion:

These strategies can help reduce customer churn and improve overall business performance.
